

Dr. Philippe Généreux is a world-renowned interventional cardiologist, working at the Morristown Medical Center, in New Jersey, (Co-Director of the Structural Heart Program), and at the Hôpital du Sacré-Coeur de Montréal at the University of Montréal in Montréal, Québec, Canada (Director, Structural Heart Program). In addition, he is the director of the angiographic core laboratory at the Cardiovascular Research Foundation in New York City.

Dr. Généreux's clinical and research interests include transcatheter valve replacement, aortic stenosis risk stratification, treatment of coronary calcification, and cardiovascular device innovation. He is author or co-author of more than 300 published or in-press peer-reviewed journal articles, 150 abstracts, six book chapters and is a frequent faculty presenter at major international professional meetings. His clinical and research accomplishments have been recognized locally and internationally by professional cardiology organizations, with major TCT and ACC awards in 2010 and 2012, including the "Young Investigator Award" in 2012. He is an active member of the Canadian and U.S.-based cardiology professional societies. He is currently the global principal investigator of 3 major international randomized trials in the field of aortic stenosis and coronary artery disease.

Dr. Généreux earned his medical degree from the University of Montreal in 1996 and did his internal medicine residency and general cardiology training at the University of Sherbrooke in Quebec. In addition, he did his interventional cardiology fellowship at Hôpital du Sacré-Coeur de Montréal, Canada from 2007-2008, and then at Presbyterian Hospital/Columbia University from 2008-10, with a research fellowship there in conjunction with the Cardiovascular Research Foundation in New York City.
